Job Experience

Host Myanmar Software Solutions *01/2023 – Present*

***Responsibilities*:**

As a Frontend Developer *01/2023 – 07/2023*

- Designed and developed websites emphasizing intuitive UI/UX for diverse clients.
- Developed and maintained university and government websites, ensuring seamless compatibility and performance across devices.

As a Backend Developer *07/2023 – 01/2024*

- Engineered server-side logic and databases, specializing in RESTful API development.
- Ensured robust scalability, security, and performance for web applications.

As a Fullstack Developer *Present*

- Develops and maintains full-stack web applications, integrating frontend and backend components.
- Collaborates with teams to define features, conduct code reviews, and ensure high application quality standards.

Projects

Bagan Management Institute
baganmanagementinstitute.com

- This website was developed using WordPress as the Content Management System (CMS). The design was crafted with HTML, CSS, JavaScript, and jQuery, integrated seamlessly with WordPress.

Myanmar Brewery Ltd
myanmar-brewery.com

- This website was developed using the Laravel PHP framework, functioning as both a content management system (CMS) and an HR management system for managing job vacancies.

Community Forestry Unit Forest Department
cfmyanmar.org

- The Forest Department (FD) ensures biodiversity conservation and sustainable forest management under the Forest Policy of 1995. This website, built on Laravel, utilizes Google Maps API to showcase Myanmar's forest data, supporting environmental protection efforts and community needs.

MEG Transport Delivery System

- This system is currently being developed with a Vue.js frontend and a Laravel PHP backend. It includes three applications: a credit customer app, a delivery app, and an agent app.
